Summary

Senior Software Engineer at Critical Software, working on Pulsar, ERP-style web platform that supports core company operations. Strong background in backend development, integrations, databases, and engineering best practices. Known for delivering reliable, scalable and well-structured solutions, collaborating effectively with cross-functional teams, and continuously improving product quality and performance.

Work Experience

SOFTWARE ENGINEER

Critical Software

September 2020 - Present

- Designed and maintained a multi-container ERP-style platform supporting core company operations.
- Built and evolved backend services handling business logic, database access, and Kafka-based integrations with Jira, CRM, and Business Central.
- Delivered features across HR, project management, expenses, vacation workflows, and procurement.
- Improved reliability and performance through architecture contributions, documentation, and continuous improvement initiatives.
- Mentored junior developers through code reviews, onboarding support, and best-practice guidance.
- Since 2026, leading LLM-powered automation flows to accelerate development workflows using GitHub Copilot and Claude Code.
